

Startup - Single page website for startup companies and freelancers

v1.0.0

© Railslauncher <railslauncher@gmail.com>

Table of contents

- Directory structure
- CSS usage
- JS usage
- LESS usage
- Recommended image sizes
- Plugins used to build Startup

Directory structure

Startup directory structure is given below.

- css/
- less/
- js/
- images/
- vendor/
- docs
- index.html
- README.md
- LICENSE

CSS usage

Both compressed and uncompressed CSS files are included for Startup in `css/` path. Using the minified(`startup.min.css`) file will result in better performance. This also applies for all themes.

1. `css/startup.css`
2. `css/startup.min.css`

You can link Startup CSS to HTML page as given below.

```
<link rel="stylesheet" type="text/css" href="css/startup.min.css">

<!-- If you prefer some Startup theme -->
<link rel="stylesheet" type="text/css" href="css/startup-sassy.min.css">
```

JS usage

JS file is included for Startup in `js/` path. `startup.js` should be included after all its dependencies.

1. `js/startup.js`

You can link Startup JS to HTML page as given below.

```
<script type="text/javascript" src="js/startup.js"></script>
```

LESS usage

All the Startup specific LESS files are kept in `less/startup/` path including themes.

1. `less/startup/variables.less`
2. `less/startup/navbar.less`
3. `less/startup/hero.less`
4. `less/startup/skills.less`
5. `less/startup/services.less`
6. `less/startup/portfolio.less`
7. `less/startup/timeline.less`
8. `less/startup/opensource.less`
9. `less/startup/contact-me.less`
10. `less/startup/footer.less`
11. `less/startup/global.less`
12. `less/startup/startup.less`

If you want to use the LESS version of Startup in your application copy the `less/startup/` into your application except themes folder. And import the `less/startup/startup.less` in your application less file.

```
@import "/path-to-startup/startup.less";

// If you prefer to use some Startup theme, replace startup.less with theme file.
// For example to import the startup-sassy.less theme you need to replace startup.less with startup-sassy.less

@import "/path-to-startup/startup-sassy.less";
// NOTE: The import statements in the theme should point to the correct path of the LESS files.
```

Generating custom theme in Startup

If you want to generate your own theme, just change one less variable in main importer file. You need to change the `@theme-bg` in the main Startup LESS importer. If you want to change the theme skin color to `#d43631` follow the below code snippet.

```
// Content of the main LESS importer(startup.less) will be

@theme-bg: #d43631; // This is your required theme color. Thats it.
@theme-color: #fff; // Change of text color is not recommended.

@import "variables";
@import "navbar";
@import "hero";
@import "skills";
@import "services";
@import "portfolio";
@import "timeline";
@import "opensource";
@import "contact-me";
@import "footer";
@import "global";
```

Recommended image sizes

Using recommended image size will avoid image scaling at browser which will increase the page loading speed.

Image type	Image Size
Startup logo	100x50
Freelancer profile image	425x585
Service image	360x220
Project image	360x250
More project screenshots (In modal)	568x355
Client image (In testimonial)	125x125
Event image (In timeline)	455x316
Opensource project logo	100x100

Plugins used to build Startup

Below are the list of libraries that Startup depends on.

Plugin	URL
Bootstrap v3.2.0	http://getbootstrap.com/ (http://getbootstrap.com/)
jQuery v2.1.1	http://api.jquery.com/ (http://api.jquery.com/)
Font-Awesome v4.2.0	http://fontawesome.github.io/Font-Awesome/ (http://fontawesome.github.io/Font-Awesome/)
animate.css v3.2.1	http://daneden.github.io/animate.css (http://daneden.github.io/animate.css)
WOW.js v1.0.1	http://mynameismatthieu.com/WOW/ (http://mynameismatthieu.com/WOW/)
pace.js v0.5.6	http://github.hubspot.com/pace/docs/welcome/ (http://github.hubspot.com/pace/docs/welcome/)
jquery.shuffle.js v2.1.2	https://github.com/Vestride/Shuffle (https://github.com/Vestride/Shuffle)
jQuery Validation v1.13.1	http://jqueryvalidation.org/ (http://jqueryvalidation.org/)
Timeline v1.0.0	https://github.com/soundarapandian/timeline (https://github.com/soundarapandian/timeline)
