- Directory structure
- CSS usage
- JS usage
- LESS usage
- Recommended image sizes
- Plugins used to build Solo
- Support for Solo

Directory structure

Solo directory structure is given below.

- css/
- less/
- js/
- images/
- vendor/
- docs
- index.html
- README.md
- LICENSE

CSS usage

Both compressed and uncompressed CSS files are included for Solo in `css/` path. Using the minified(`solo.min.css`) file will result in better performance. This also applies for all themes.

1. `css/solo.css`
2. `css/solo.min.css`

You can link Solo CSS to HTML page as given below.

```
<link rel="stylesheet" type="text/css" href="css/solo.min.css">

<!-- If you prefer some Solo theme -->
<link rel="stylesheet" type="text/css" href="css/solo-sassy.min.css">
```

JS usage

JS file is included for Solo in `js/` path. `startup.js` should be included after all its dependencies.

1. `js/startup.js`

You can link Solo JS to HTML page as given below.

```
<script type="text/javascript" src="js/startup.js"></script>
```

LESS usage

All the Solo specific LESS files are kept in `less/solo/` path including themes.

1. `less/solo/variables.less`
2. `less/solo/navbar.less`
3. `less/solo/hero.less`
4. `less/solo/skills.less`
5. `less/solo/services.less`
6. `less/solo/portfolio.less`
7. `less/solo/timeline.less`
8. `less/solo/opensource.less`
9. `less/solo/contact-me.less`
10. `less/solo/footer.less`
11. `less/solo/global.less`
12. `less/solo/solo.less`

If you want to use the LESS version of Solo in your application copy the `less/solo/` into your application except themes folder. And import the `less/solo/solo.less` in your application less file.

```
@import "/path-to-solo/solo.less";

// If you prefer to use some Solo theme, replace solo.less with theme file.
// For example to import the solo-sassy.less theme you need to replace solo.less with solo-sassy.less

@import "/path-to-solo/solo-sassy.less";
// NOTE: The import statements in the theme should point to the correct path of the LESS files.
```

Generating custom theme in Solo

If you want to generate your own theme, just change one less variable in main importer file. You need to change the `@theme-bg` in the main Solo LESS importer. If you want to change the theme skin color to `#d43631` follow the below code snippet.

```
// Content of the main LESS importer(solo.less) will be

@theme-bg:    #d43631; // This is your required theme color. Thats it.
@theme-color: #fff; // Change of text color is not recommended.

@import "variables";
@import "navbar";
@import "hero";
@import "skills";
@import "services";
@import "portfolio";
@import "timeline";
@import "opensource";
@import "contact-me";
@import "footer";
@import "global";
```

Recommended image sizes

Recommended image sizes

Using recommended image size will avoid image scaling at browser which will increase the page loading speed.

Image type	Image Size
Solo logo	100x50
Freelancer profile image	425x585
Service image	360x220
Project image	360x250
More project screenshots (In modal)	568x355
Client image (In testimonial)	125x125
Event image (In timeline)	455x316
Opensource project logo	100x100

Plugins used to build Solo

Below are the list of libraries that Solo depends on.

Plugin	URL
Bootstrap v3.2.0	http://getbootstrap.com/ (http://getbootstrap.com/)
jQuery v2.1.1	http://api.jquery.com/ (http://api.jquery.com/)
Font-Awesome v4.2.0	http://fontawesome.github.io/Font-Awesome/ (http://fontawesome.github.io/Font-Awesome/)
animate.css v3.2.1	http://daneden.github.io/animate.css (http://daneden.github.io/animate.css)
WOW.js v1.0.1	http://mynameismatthieu.com/WOW/ (http://mynameismatthieu.com/WOW/)
pace.js v0.5.6	http://github.hubspot.com/pace/docs/welcome/ (http://github.hubspot.com/pace/docs/welcome/)
jquery.shuffle.js v2.1.2	https://github.com/Vestride/Shuffle (https://github.com/Vestride/Shuffle)
jQuery Validation v1.13.1	http://jqueryvalidation.org/ (http://jqueryvalidation.org/)
Timeline v1.0.0	https://github.com/soundarapandian/timeline (https://github.com/soundarapandian/timeline)
